

## SUPATRAC Blackbird Farpoint

Press Release 29th September 2023

Today SUPATRAC announces a revision to the Blackbird tone-arm, the Blackbird 'Farpoint'.

The Blackbird Farpoint increases pivot distance by a centimetre with a corresponding increase in arm length on the same turntable. Hence the name, 'Farpoint'. Farpoint tone-arms incorporate reinforcement at the critical headshell and thrustbox junctions. The arm pillar is stiffer and more universal, allowing each Blackbird tone-arm to be adapted to a wider range of turntable mounts. Suspension and lean ('azimuth') adjustments have been separated so that hot-swapping tone-arms is more easily achieved without the need to re-adjust the suspension.

The range of pivot distances is also increased and suspension length is shortened. These improvements make the Blackbird Farpoint more adaptable while improving the Blackbird's already unprecedented performance by a whisker. The Blackbird Farpoint is on demonstration at this weekend's UK Hifi Show Live at Ascot Racecourse, 29 September to 1 October 2023.
